

5 More about your child's test results

For grades three through five, these charts show how your child did in the different content areas for each test taken. The subject for each test is listed at the top of each chart. Reports for students include English–language arts and mathematics for grades three, four, and five and science for grade five.

Next to the name of each content area is the number and percentage of questions your child answered correctly in that content area, represented by a diamond on the chart.

The questions on the CMA are grouped into the content areas on the left of each chart. These content areas are based on the California content standards, which describe what your child should know and be able to do at each grade. (If your child did not take any of the CMA tests expected for his or her grade level or if a score was unavailable to be reported, this is noted on the report.)

This section does not appear on the STAR Student Report for the CMA for students in grade six, seven, and eight.

6 About the CMA

This section describes the CMA, the newest test in the Standardized Testing and Reporting Program.

More about the STAR Program

This section provides information about how you can get answers to your questions about the STAR Program and your child's CMA results. Visit the California Department of Education's CMA Web page at <http://www.cde.ca.gov/ta/tg/sr/cmastar.asp> for background information, participation criteria, test blueprints, and sample test questions.

7 Writing Application

For grade seven, this section tells how your child did on the writing test if your child took the CMA writing instruction. (If your child did not take the CMA writing test or if a score was unavailable to be reported, this is noted on the report.)

Depending on your child's grade level, the content of this section will vary.
